

# MDXi Appolonia Data Center, Ghana

## Appolonia Data Center Newsletter – September 2020

We are pleased to report progress on the construction of our Data Center project in Appolonia City, Accra, Ghana where we officially broke ground in May 2020.

Leading MEP and EPC contractors, Sterling & Wilson are handling the modular mechanical and electrical units which are nearing readiness for Factory Acceptance, while a team of local partners led by Incept Architectural Consults (IAC) are delivering the civil, structural, construction and site works.

We are excited about the construction progress we have made towards completion of the new office building and data center, despite the challenges posed by the COVID-19 Pandemic. Already, the following milestones have been achieved:

- Main building foundation and modular unit platforms completed.
- Manufacturing of the Data Center prefabricated module completed and ready for Factory Acceptance test
- Super structure works of main building ongoing and deck completed.

With construction well underway, we are well positioned to deliver a Tier III, world-class, data center to service the needs of enterprises and institutions in Ghana and even neighboring countries.

### Ground and First floor slab construction works completed

Appolonia Data Center is being built in conformity with TIA 942 and Uptime Tier III standards and all efforts are being made to ensure the Facility is certified for operations starting during the first quarter 2021.

Factory Acceptance Test (FAT) for the modular unit shown below will take place later this month to ensure all prefabricated and pre-integrated components comply with specification and operational as designed. Following a successful FAT, the module will be shipped to site by November for installation and final integration

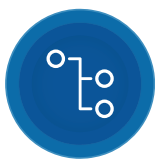

## Pre Fabricated DC module and generator assembly

### ABOUT APPOLONIA DATA CENTER

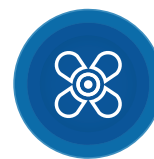

Tier III facility constructed on secured 4,047 sqm land

104-rack world-class facility with private colocation whitespace.

Enterprise-grade 24x7 multi-level security and video surveillance

Precision Cooling

Safety and fire suppression systems with multiple redundancies built into the power, cooling and security

Carrier-neutral facility with connectivity options to the

Provides access to various Internet Exchanges including the GIX (Ghana), IXPN (Nigeria), LINX (London), DECIX

**Appolonia Data Center is well poised to provide colocation, cloud and interconnection services to foster the continued growth of a competitive, open access, tech ecosystem in Ghana.**

### OTHER NEWS FROM MAINONE DATA CENTERS ACROSS THE REGIONS

Development work has started on the expansion of the MDXi Lekki, Lagos, Nigeria facility to accommodate growth. Watch this space for future announcements.
