As COVID-19 continues to present great risks across the world and wreak havoc on lives and the global economy, MainOne is pleased that we are able to make positive contributions to help our immediate communities and our customers alike.

In Nigeria, MainOne has partnered with Lagos, Edo State Governments and the National Center for Disease Control (NCDC) by connecting key centers and providing high-speed internet access to contain the spread of the pandemic. Read More

In Ghana, MainOne is supporting critical Government locations with increased internet capacity during this period.

We have reconfigured services for a lot of our customers, ensuring continuity of essential services during this period. With key focus on sustainability and safety, we also embedded staff in our critical locations as we managed through the lockdown period.

Post COVID-19, we expect technology adoption will be a critical driver for businesses to address what will become the new normal in enforcing social distancing while enhancing business resiliency, business continuity and data security. Now more than ever, safeguarding data and prioritizing backup strategy have become essential. Data Centers will provide greater levels of security, flexibility and accessibility to data and information around the world.

During this crisis, our world-class, connectivity infrastructure has continued to keep West Africa connected with our Cloud, Colocation and Connectivity solutions ensuring 24/7 operational accessibility to businesses in the following ways;

Cloud Computing Services

Our Data Centers have ensured critical availability for customers during this period as customers on our Cloud platform focus their energy and time on their core business without worrying about keeping their business running i.e. power availability, adequate cooling and security etc. Additionally, with increased cybersecurity threats currently, hosting at MDXi guarantees security of data as we ensure encryption of Cloud storage, role-based access to only authorized users, multi-factor authentication setup, and Managed DDoS Protection Solution, making cyber-attacks difficult.

Remote Hands and Eyes Support

For customers colocated in our Data Centers, we are finding that our 'Remote Hands and Eyes Support (RHES) have been most critical to ensuring the peace of mind and business continuity at this time. RHES reduces the burden of physical visits to our data centers by providing access to professional and competent engineers who act as your "eyes and hands" in providing physical technical interventions to tasks such as inspection of IT equipment and racks, replacement of faulty hardware, patching, labelling and re-labelling of cables, cable port swap/reset etc.

Managed Security

Reports of growing cybersecurity attacks are not unfounded given the reality that working from home is the new normal. MainOne's Managed DDoS Protection Solution provides its customers with a fool-proof protection against malicious spam attacks and botnets that can cripple your organization's web interface and deny legitimate access to services. This makes cyber-attacks difficult and ensures your business always has clean traffic available even while under attack.

Increased use of collaboration tools

With more people working from home this period, virtual meetings have emerged as a viable solution for continuous business operations with Cloud applications such as Microsoft Teams, Zoom and Skype making remote working more collaborative and productive. For customers already using the Microsoft Suite for office automation, Microsoft Teams is an easy addition that provides: Real-time conversation channels, Full Microsoft 365 Suite Integration, Direct access to email, Skype, OneDrive, SharePoint and much more.

Today's businesses will need to re-evaluate their strengths, weaknesses and make improvements in areas that require more flexibility. Resilience will be at the forefront of every strategy to deal with the new post-COVID normal while agility will ensure competitiveness and responsiveness to the unexpected. We believe businesses that are able to leverage strategic IT services will emerge from this period stronger and be able to compete in the emerging global connected society.
